

Linux Install

1. Upload all the files and folders to your server from the "Upload" folder.
This can be to anywhere of your choice.
e.g. /public_html/store or /public_html

2. For Linux/Unix make sure the following folders and files are writable.

```
chmod 0755 or 0777 image/  
chmod 0755 or 0777 image/cache/  
chmod 0755 or 0777 cache/  
chmod 0755 or 0777 download/  
chmod 0755 or 0777 config.php  
chmod 0755 or 0777 admin/config.php
```

If 0755 does not work try 0777.

3. Make sure you have installed a MySQL Database which has a user assigned to it
DO NOT USE YOUR ROOT USERNAME AND ROOT PASSWORD
4. Visit the store homepage
e.g. <http://www.example.com> or <http://www.example.com/store/>
5. Follow the onscreen instructions.
6. Delete the install directory.

Windows Install

1. Upload all the files and folders to your server from the "Upload" folder.
This can be to anywhere of your choice.
e.g. /wwwroot/store or /wwwroot

2. For Windows make sure the following folders and files permissions allow Read and Write.

```
image/  
image/cache/  
cache/  
download/  
config.php  
admin/config.php
```

3. Make sure you have installed a MySQL Database which has a user assigned to it
DO NOT USE YOUR ROOT USERNAME AND ROOT PASSWORD
4. Visit the store homepage
e.g. <http://www.example.com> or <http://www.example.com/store/>
5. Follow the onscreen instructions.
6. Delete the install directory.
